

Military Heritage Sustainable Skills for Life

Instructional Lesson Plan 5

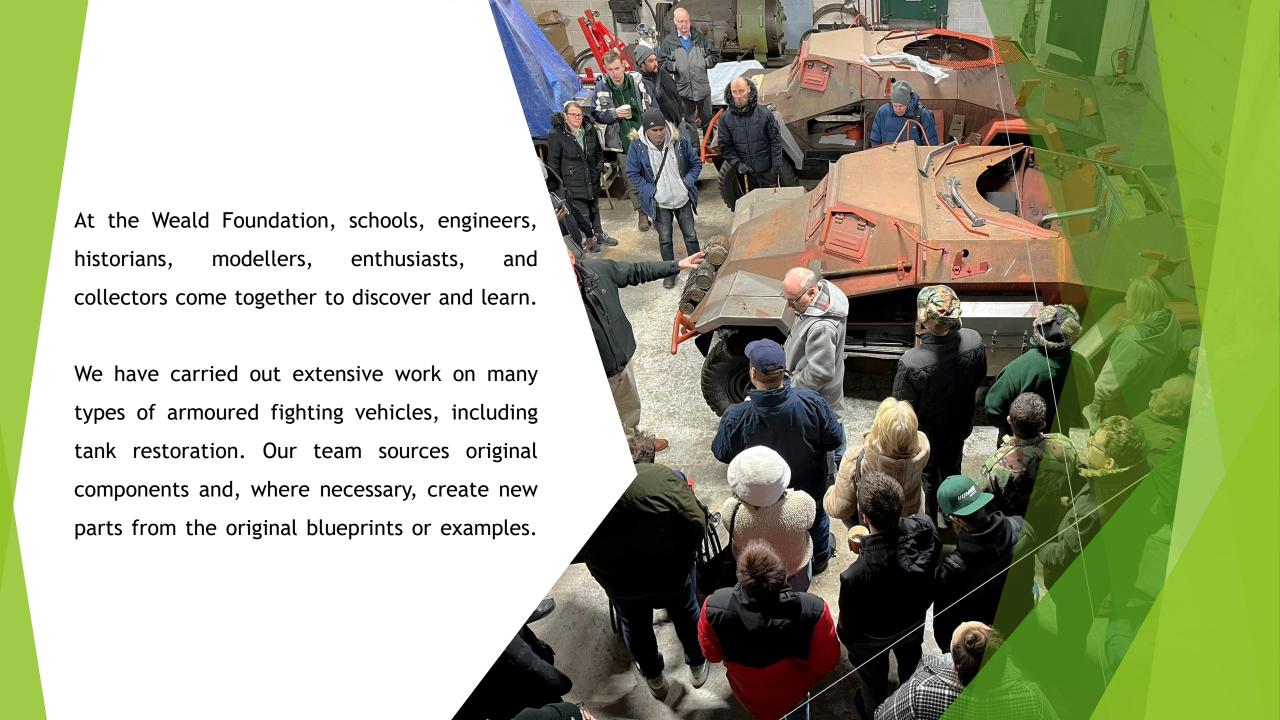

Willys MB 'Jeep'

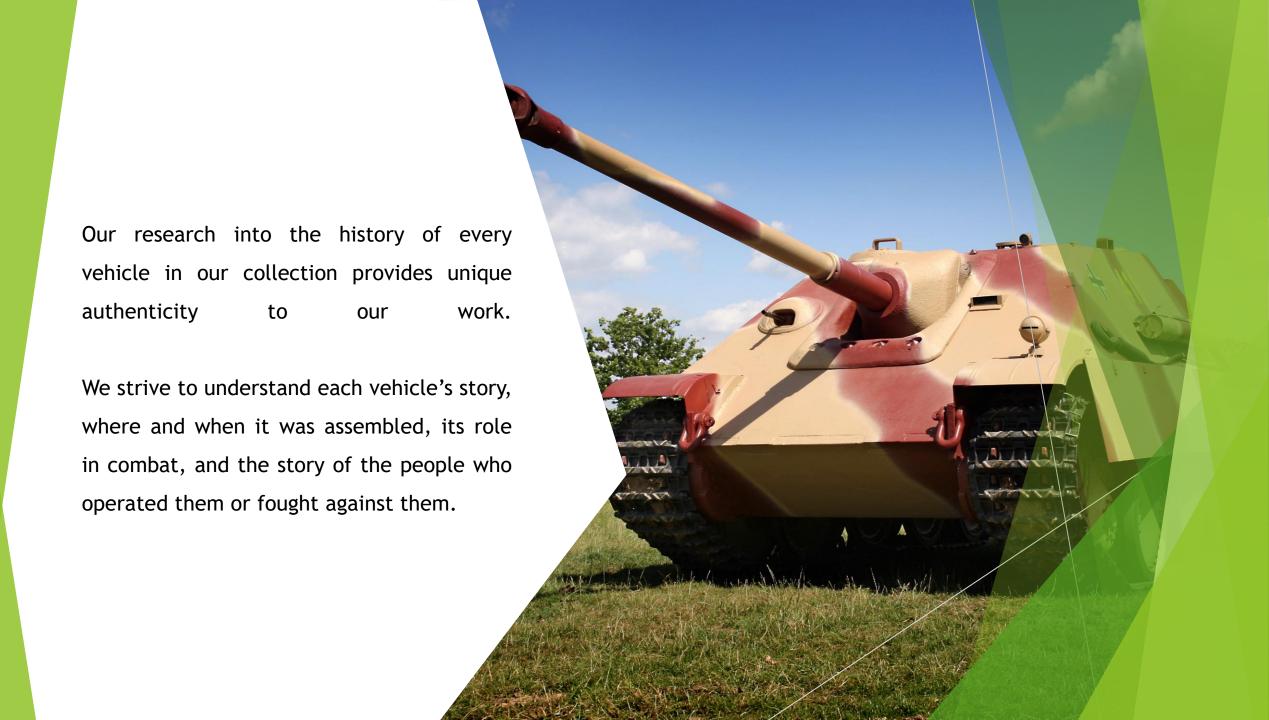

Who are we and what we do?

The Weald Foundation is a charitable organisation established to preserve, restore and maintain historic military vehicles from both World Wars, and to educate the public about their history.

Our unique line up of rare and important military vehicles that we have rescued is considered to be one of the finest working collections in the world.

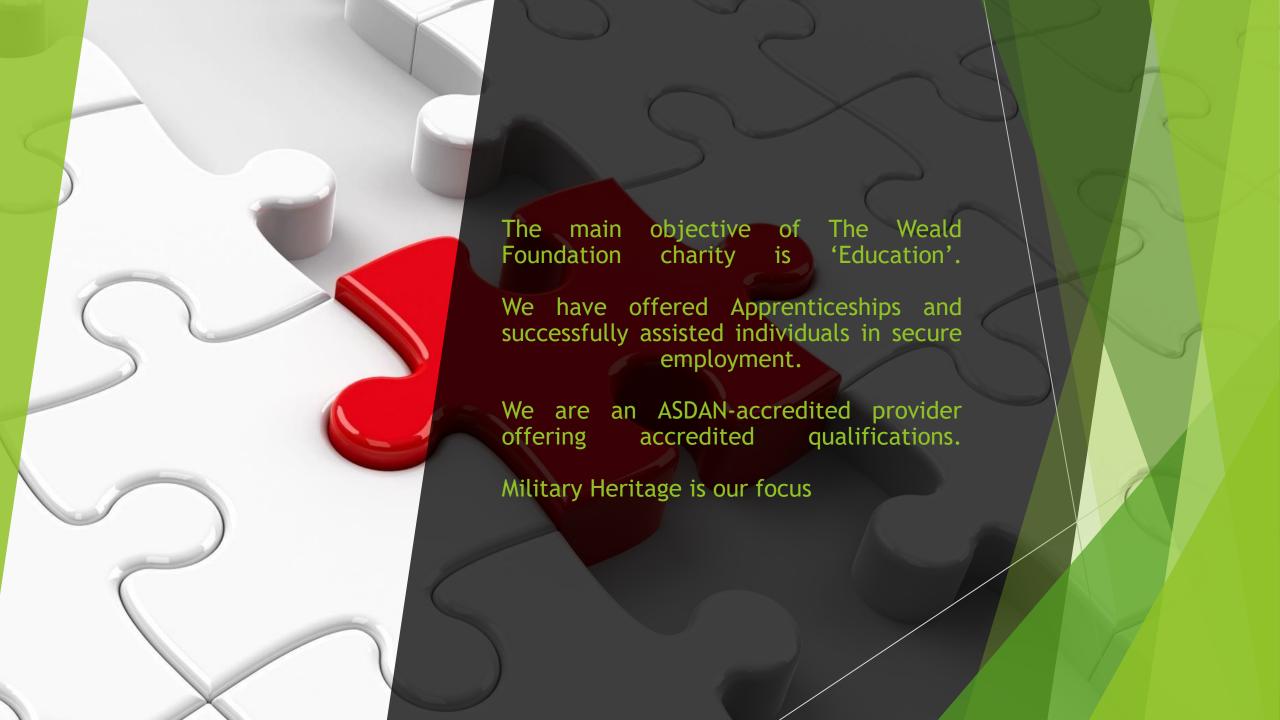

Skills and Development through Military Heritage

Providing Sustainable Skills for Life

Willys MB 'Jeep'

One of the most iconic historic vehicles of World War II is the **Truck ½ ton 4×4** better known by its nickname 'Jeep'. This little vehicle was and is so common its origins and details are largely ignored except by the many thousands of collectors that collect and own one.

In 1940, the US Army requested industry to provide a small general-purpose four-wheel drive vehicle. Several trials and offers proceeded but by late 1941 the design of the **Truck ¼ ton 4×4** was standardised. The outcome is often referred to as having been designed by committee as it comprised of a Willys L134 "Go-Devil" engine, Spicer four-wheel drive and Ford bodywork.

Willys Overland Motors Inc. were awarded main contractor status, primarily because of their then modern and reliable 60 HP L134 "Go-Devil" engine. Production of their standardized version of the **Truck ½ ton 4×4** with their model number **Willys MB** started in November 1941 at the Willys plant in Toledo, Ohio.

To increase production contracts were also placed with Ford. These contracts stipulated that they would use the Willys Go-Devil engine and follow Willys drawings. Also, Ford had to diversify production, so Ford manufacturing took place at six different assembly plants across the U.S: Dearborn – Michigan, Louisville – Kentucky, Chester – Pennsylvania, Dallas – Texas, Richmond – California and Edgewater – New Jersey. Willys supplied approximately 3,000 chassis to get things going. The Ford model was known as **Ford GPW**.

The power of the U.S. industry can be seen with the numbers produced up to the end of the war in Europe in early May 1945. Willys starting in November 1941, produced about 336,000 of their **Willys MB**. Ford starting in February 1942 produced approximately 260,000 of their **Ford GPW**.

Ford also produced nearly 13,000 of an amphibious variant, the **Ford GPA**, known as the "Seep", a small version of the **DUKW** amphibious truck.

In total during the European war about 610,000 "Jeeps" were manufactured. Additional deliveries in 1945 amounted to about a further 40,000. Of these some 50,000 Jeeps were delivered to the Soviet Union.

Restoration of the Willys MB 'Jeep'

Our Willys MB 'Jeep' was acquired on impulse on an auction in the late 1990s that promised a very complete and original vehicle.

The chassis number of the Collection's Willys MB is 361128 and the date of delivery was 9 September 1944.

The next image shows the Willys Jeep when it was auctioned and before restoration.

When it was purchased by the Weald Foundation, it was bedecked with every optional extra – radios, antennae, Browning 30 cal. medium machine gun with pedestal mount and Parachute Regiment insignia including a Pegasus shield on the bumper.

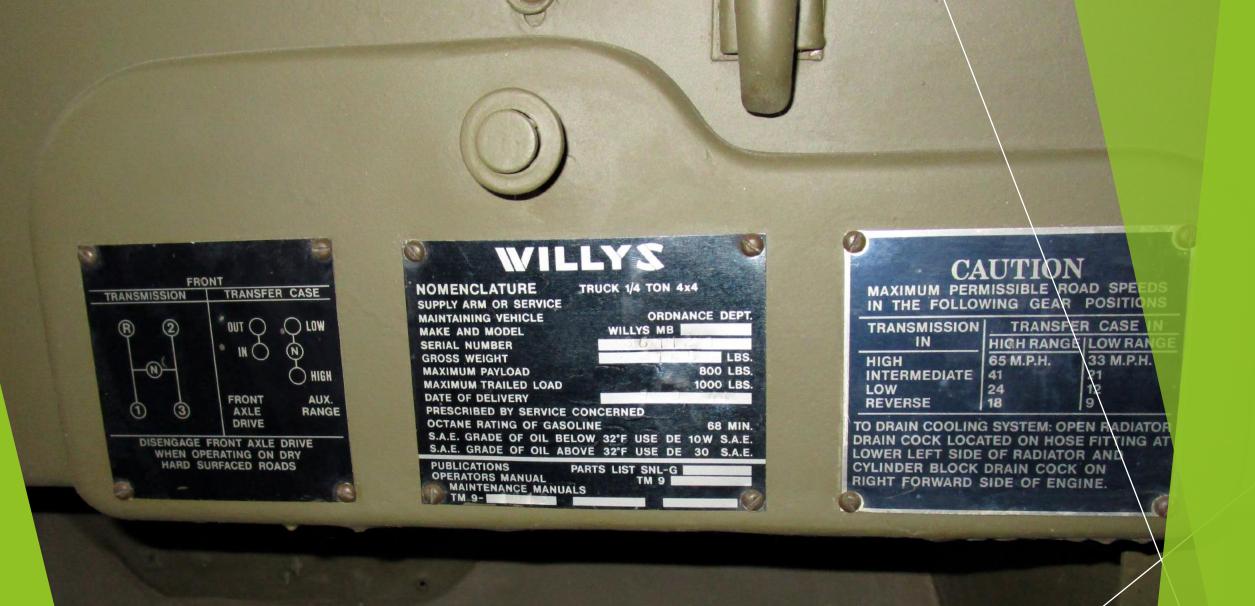

The vehicle has undergone a comprehensive overhaul. As there was no evidence of the radios having been originally fitted, or that it had a Browning .30 cal. fitted during its operational service, all of these very interesting and desirable objects were stripped, leaving a basic and original Willys Jeep without a heritage.

We still face several challenges. The previous owner changed the original 6v starter for the more reliable, yet incorrect, 12v option. Two data plates are not original, and originals are infinitely more desirable.

We have applied no markings or insignia to the jeep given its unknown heritage. Of all the vehicles we have in the collection the Willys MB 'Jeep' is the most pleasant ride, the least complicated to operate and the most exhilarating to drive.
